

Assignment-3 Questions

Data: Use [EU_Energy_Prices.xlsx](#) file to answer Q1 and Q2 through Visuals + Contexts.

Q1. Visualise the trends of impacts of taxes on electricity unit prices.

Q2. Through visualization highlight the seasons which have maximum fluctuations in these trends.

Data: Use data from [co-emissions-per-capita.zip](#) and answer the questions Q3 and Q4 through Visuals + Contexts

Q3. Visualize the information given in this data over the over the years on world map.

Hint: you can you use Plotly express and PyCountry (to get the iso_alpha codes)

Q4. Visualize the significant changes in CO2 emission over the given time frame in the data.

Data: use the information data given in the [\[Link1\]](#)

Q5. Pick your favourite domain given in the link and build a visualization-story (you can use Infographic style of arrangement also) the visualization out of the visualizations given in the picked domain for the user engagement.

Note: Don't forget to use proper context and insights from the input visualization. Try to pick the domains in which dataset is readily available/ downloadable.
